DEVELOPMENT OF NUMERICAL SIMULATION SOFTWARE FOR HYBRID ROCKET ENGINES' PERFORMANCE STUDIES

by TELMO AMARO

and supervised by

professor FRANCISCO BROJO

*Thesis submitted to the Department of Aerospace Sciences of Beira Interior University
for obtaining the master's degree in Aeronautical Engineering.*

Coimbra, 18th August 2009

This work is dedicated to my father, mother, brothers and sister who always gave me their support.

For providing essential guidance during this research and development, my thanks to:

Professor Francisco Brojo
Professor José Páscoa
Richard Newlands

Abstract

A numerical simulation software was developed for Hybrid Rocket Engines' performance studies. Two-dimensional gas flow, mass fraction and regression rate functions were developed and tested with H₂ engine geometry. Program structure was prepared to determine three-dimensional gas flows, combustion characteristics and thrust curves.

Nomenclature	1
---------------------------	---

Chapter I

1.1 Introduction	2
1.2 Objectives	5

Chapter II

2.1 Principles of Rockets	6
2.1.1 In-flight Forces	6
2.1.2 Thrust	6
2.1.3 Impulse	7
2.1.4 Mass flow	8
2.1.5 Nozzle	8
2.1.5.1 Ideal Rocket	8
2.1.5.2 Nozzle DeLaval	9
2.1.5.3 Optimal, Under- and Over-Expanded Nozzles	10
2.1.5.4 Escape Velocity	10
2.2 The Hybrid Rocket Engine	11
2.2.1 Overview	11
2.2.2 Regression rate	13
2.3 Aspire-Space H2 Rocket Engine	14
2.4 Combustion	16
2.4.1 Chemical Reaction	16
2.4.2 Reaction Rate Equation	16
2.4.2.1 Reaction Rate	16
2.4.2.2 Orders of Reaction	17
2.4.2.3 Arrhenius Equation	17
2.4.2.4 Frequency Factor	17
2.4.2.5 Activation Energy	17
2.5 Fluid Mechanics	18
2.5.1 Navier-Stokes Equations	18
2.5.2 Euler Equations	19
2.6 Gas Dynamics Computational Method.....	20
2.6.1 Control Volumes' Grid	20
2.6.2 Time-Marching Method Applied to Euler Equations	21
2.6.3 Courant-Friedrichs- Lewy Condition	22
2.6.4 Wall Boundary Condition	24
2.6.5 Inlet Boundary Condition	25

2.6.6	Outlet Boundary Condition	26
2.6.7	Artificial dissipation	26
2.7	State of the Art	29
2.7.1	Numerical Simulations of Hybrid Rocket Engines.....	29
2.7.2	Existing applicable software	30

Chapter III

3.1	Mathematical Model.....	31
3.1.1	Gas flow solver	31
3.1.2	Combustion process solver.....	32
3.1.2.1	Artificial sublimation	32
3.1.2.2	Rates of the reactions	33
3.1.2.3	Thrust curves	33
3.2	Software Engineering Process	34
3.2.1	Programming Language	34
3.2.2	Software Architecture	35
3.2.2.1	Scheme	35
3.2.2.2	Description of JAVA Segment Classes	36
3.2.2.3	PDL	36
3.3	Testing and Validation	38

Chapter IV

4.1	Study Case	39
4.2	Theoretical Performance Results	39
4.3	Observations	41

Chapter V

5.1	Future Work	42
5.2	Conclusion	43
